Thanks for filling out [Full Stack Developer - 360](#)

Here's what was received.

[Edit response](#)

## Full Stack Developer - 360

We're 360Ground. We build extreme performance, scalable & compliant mobile & web-based applications & systems focusing on platform & banking solutions. Our experience includes the design, development & implementation of mobile & web applications for government, banks & private companies at home and beyond. Our team developed the most powerful banking systems like Amole mPOS and mobile apps like Meda, Meda shi, and so much more... Our culture and fun atmosphere make life at 360Ground rewarding and fun, whichever comes first :)

We are looking for a Full Stack Developer to build mobile & web applications for banks, large enterprises, and government agencies, and maintain in-house products. You will be responsible for handling the design, architecture, development, and testing of key applications in a dev & production environment.

It does not matter where you are from, what schools you went to, or what degrees you've earned or if not at all. What we care about is a sense of curiosity, a drive to solve problems, and a passion for learning. If you're a little weird, interested in everything, and feel like you don't quite fit in anywhere else, we encourage you to apply.

\* If you are shortlisted, we may send a code challenge as part of the interview process

### You have/are

1. Full-stack engineering experience in a production environment.
2. Strong problem-solving skills and self-direction.

3. Expertise in front-end languages like HTML, CSS, and JavaScript.
4. Proficiency in JavaScript frameworks such as Angular JS, React, and Amber.
5. Expertise in server-side languages like Python, Ruby, Java, PHP, .Net.
6. Experience with web services such as Firebase and AWS.
7. Demonstrated experience in developing projects from scratch.
8. Familiarity with design patterns and an in-depth understanding of synchronous vs. asynchronous paradigms.
9. Proficient in multi-threading concepts.

#### **You will**

1. Handle the design, architecture, development, code review, and testing of key applications.
2. Manage and communicate work responsibilities to subordinates
3. Identify performance bottlenecks and come up with novel ways to solve them
4. Develop/test system components
5. Build reusable code and libraries for future use
6. Design and implement scalable web service APIs.
7. Work with SQL and NoSQL DB systems.
8. Develop and maintain various internal products focused on banking, gaming & enterprise solutions
9. .Implement security and data protection systems.

#### **Qualifications:**

1. Demonstrated experience in developing projects from scratch.
2. Familiarity with design patterns.
3. In-depth understanding of synchronous vs. asynchronous paradigms.
4. Proficiency in multi-threading concepts.

#### **Benefits:**

1. Competitive salary and benefits.
2. An inclusive and collaborative work environment.
3. Opportunity to work on complex and large systems

**We encourage personal, original responses to ensure genuine and fair evaluation. Avoid using AI-generated or template responses in your application. Submissions identified as such will be automatically rejected.**
